

Case Study - Private - Managed Services - EAS Onboarding

Onboarding the AWS environment of EAS into our managed services.

About EAS

Established in 2000, EAS specialises in enterprise architecture (EA). They passionately believe that EA, if properly implemented and managed, can provide huge benefits through better understanding of an organisation's current and future business operating models. Their mission is to make complex organisations easier to manage by articulating the impact of strategic decisions on their structures, processes and systems, and by helping them maximise their efficiency, focus their investments, and build a foundation for future success.

THE CHALLENGE

Streamlining their environment across different global regions - structuring and standardizing deployment and operational practices - monitoring and patching their environment - build-to-grow infrastructure

THE SOLUTION

Their current solution already running on AWS was rebuilt in DEV, UAT & Production across various regions globally. Then we deployed our Cloudar managed services suite and helped them develop a new way of handling their AWS environment, so that they can focus on developing the application that runs on their now-managed infrastructure.

THE BENEFITS

Monitoring

Previously there was no monitoring on their environment, now our service desk keeps a close eye on a

Security

Through various tools we make sure that the global infrastructure of our client is actively monitored for

Reliability

Production was built with failover regions and 24x7 monitoring to make sure no impact is felt at end-customer

ABOUT CLOUDAR AND AWS

Cloudar is ISO/IEC27001 certified, AWS Premier Consulting Partner & Next-Gen MSP. Cloudar's single-vendor focus guarantees the most in-depth AWS knowledge available on the market.

Organizations using a DevOps model deliver applications quicker and innovate faster. AWS offers infrastructure resources designed to support continuous integration and delivery, infrastructure as code, microservices, and monitoring & logging.
