

ClouDar x Tinkerlist

Transforming the development & release process

About TinkerList

TinkerList is a content management system that streamlines the production workflow of television making. It allows editors to work collaboratively from the embryonal start of an idea until the moment of broadcasting and beyond.

THE CHALLENGE

Tinkerlist's traditional IAAS platform had a lot of challenges: It was time-consuming to maintain, difficult to scale and costly (scaled for peak load). Deployments were complex and cumbersome, which often impacted development speed. Tinkerlist made the strategic decision to move their workload to AWS to boost efficiency and reduce operational burden. Having no prior AWS experience, they needed a partner to help them build a redesigned, pure cloud-native platform.

THE SOLUTION

Convinced of Clouadar's strengths as a partner, Tinkerlist opted for our next-generation managed services. We designed a high-availability, built-to-scale, consumption-based (so cost-optimized) cloud-native platform for Tinkerlist. They opted for a maximum use of PaaS services, Serverless and Container technology in the new platform. The deployment of the solution was fully written in IaC Cloudformation.

THE BENEFITS

24/7 Monitoring

With Clouadar monitoring their AWS infrastructure around the clock, Tinkerlist is able to fully concentrate on product development and feature deployments.

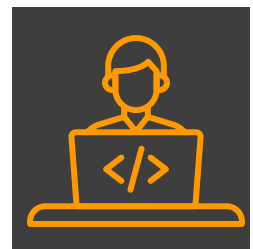

Lower TCO

The Total Cost of Ownership (TCO) of the platform will now scale with the customer base and workload.

Faster Development & Release

The new platform dramatically transformed Tinkerlist's development and release process, allowing them to release more often and with more confidence.

"Although we have some DevOps skills on our team, we primarily focus on our core business as a product company. Clouadar has built a state-of-the-art environment that meets the demands of our industry, which requires 24/7 high availability. As a result, we can now focus on scaling our product without worrying about usage peaks or downtime. We are grateful to Clouadar for enabling us to reclaim our nights of peaceful sleep.

Erik Hauters, founder

About Clouadar and AWS

Clouadar is ISO/IEC27001 certified, AWS Premier Consulting Partner & Next-Gen MSP. Clouadar's single-vendor focus guarantees the most in-depth AWS knowledge available on the market.

Organizations using a DevOps model deliver applications quicker and innovate faster. AWS offers infrastructure resources designed to support continuous integration and delivery, infrastructure as code, microservices, and monitoring & logging.
